

Due to recent events, this seminar will address the fire hazards associated with mobile food trucks and create awareness that not one code, recommended practice or standard addresses this issue as a whole to provide requirements for fire protection or life safety purposes for mobile food trucks. Fire Departments of major cities around the country are developing their own standard to solve this issue and prevent disasters from occurring in the future. An IFMA task group created language to submit as a public input to NFPA 1 and NFPA 96.
